Introduction to Statistical Methods

(S1-23_AIMLCZC418) – Assignment 1

AIML Section- 1

Each question carries 02 Marks (2 x 5 = 10 Marks)
Duration: 13th December 2023 – 29th December 2023
1) Submissions are individual
2) Solve these on paper, scan, and upload
3) Plagiarism results in zero marks
4) Write your name, BITS ID and Section on each page

1. Suppose the average marks scored by six students are 9 with variance 11.6666 and if the marks of 4 students are 4, 8, 10, 12 then find the marks of remaining two students are ?

2.Validate the following and Justify

a) The probability that a person visits Reliance Mart is 0.2 and that he visits Croma is 0.25. The probability of visiting Reliance or Croma is 0.60.

b) $P\left(\frac{\bar{A}}{B}\right) = 1 - P(\frac{A}{B})$

3.A manufacturer has three machine operators A, B and C. The first operator A produce 1% defective items, whereas the other two operators B and C produce 5% and 7% defective items respectively. A is on the job for 50% of the time, B is on the job for 30% of the time. A defective item is produced, what is the probability that it was produced by A, B, C? Based on this write your observations.

4. If A and B are two events with probability P(A)=0.38,P(B)=0.63, P(AUB)=0.78,

Then find $P(A/B), P(B/\bar{A}), P(A \cap \bar{B}), P(\bar{A}U\bar{B})$

5. 1300 families with 2 children were selected randomly, and the following data were recorded:

Number of boys in a family	2	1	0
Number of families	325	761	214

Compute the probability of a family, chosen at random, having
(i) 2 boys (ii) 1 boy (iii) No boy
Also, check whether the sum of these probabilities is 1.

----ALL THE BEST----
